News

From Core Team

We are now very close to 5,000 enrolled subjects. This is a great achievement, our thanks to the hard work from all sites.

It is with great pleasure that we are opening a new UK team which should be operational in the near future.

Message to CRAs

From Dr. Neelam Saba

Welcome to the new CRA who has joined our team in 3 counties.

Our India site is re-locating; we'd like to congratulate them on the successful address of all outstanding queries

Please remember to try and re-consent, where possible.

We are aiming to send monthly summaries of outstanding queries. It is important to address those in a timely manner.

From Monitoring Team

Please see Reminders in this page. Just a few points to improve data entry and reduce query generation.

Please let us know if you have any comments or suggestions.

Reminders

Bloods: one per month.

Please note that we would like blood results to be entered to consider the folder complete. Bloods must be entered as follows;

- Baseline compulsory
- Month 6 ideally one per month (=5).
- Month 12 ideally one per month (=6)
- Yearly F-Us ideally one per month (=12)

Date of histological diagnosis

That is the date the first diagnostic specimen or biopsy was taken as specified on the histology report. Please do not use the date the histology report was approved, as it may be different. It is also day 0 of the study. All Follow-up dates are counted from the date of histological diagnosis

TNM - Staging

For the purposes of this registry, please refer to the text in the help-box on-line and the instruction on the investigator's folder for the definitions.

Baseline Surgery

Please only record surgery that occurred within the first 30 days after diagnosis. All subsequent surgeries fall in the follow-up periods and should be recorded there.

Date of Follow-up

In case of death during a follow-up period, the date of death for that period should be the date of death. That is the date the subject exits the trial and the date up to which we record their data.

Imaging

Only imaging done for suspicion or diagnostic for VTE should be recorded
