

NEWSLETTER 3 - OCTOBER 2006

We are pleased that PERCEIVE has now recruited over 1800 patients and now have 8 sites actively recruiting.

We are pleased to welcome the team at the James P. Wilmot Cancer Center, USA who were activated on 18th September.

In the next couple of months sites in both India and Brazil should begin recruitment.

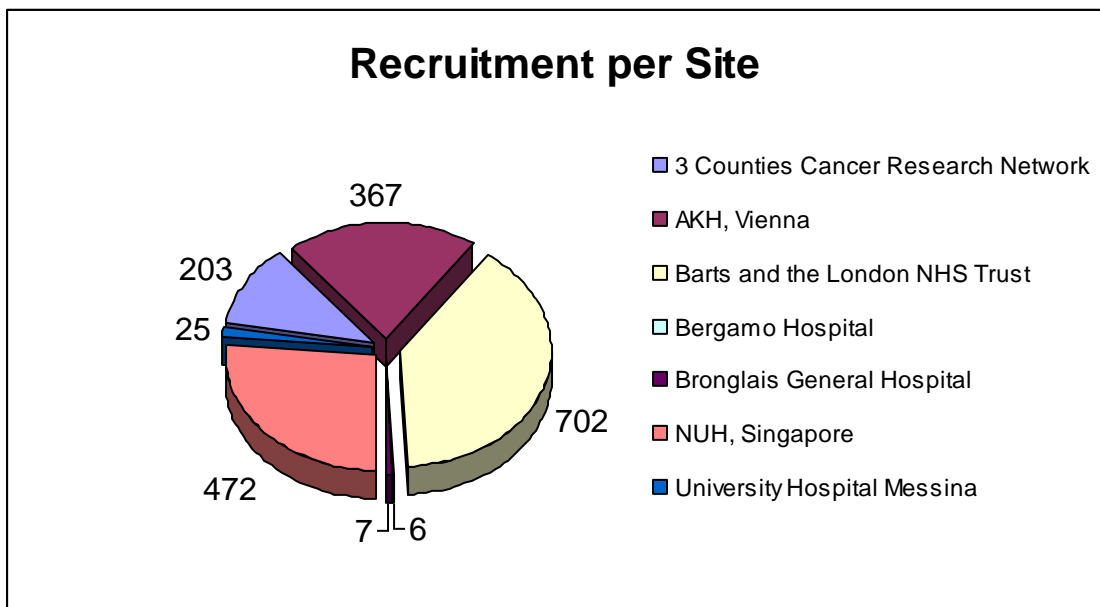

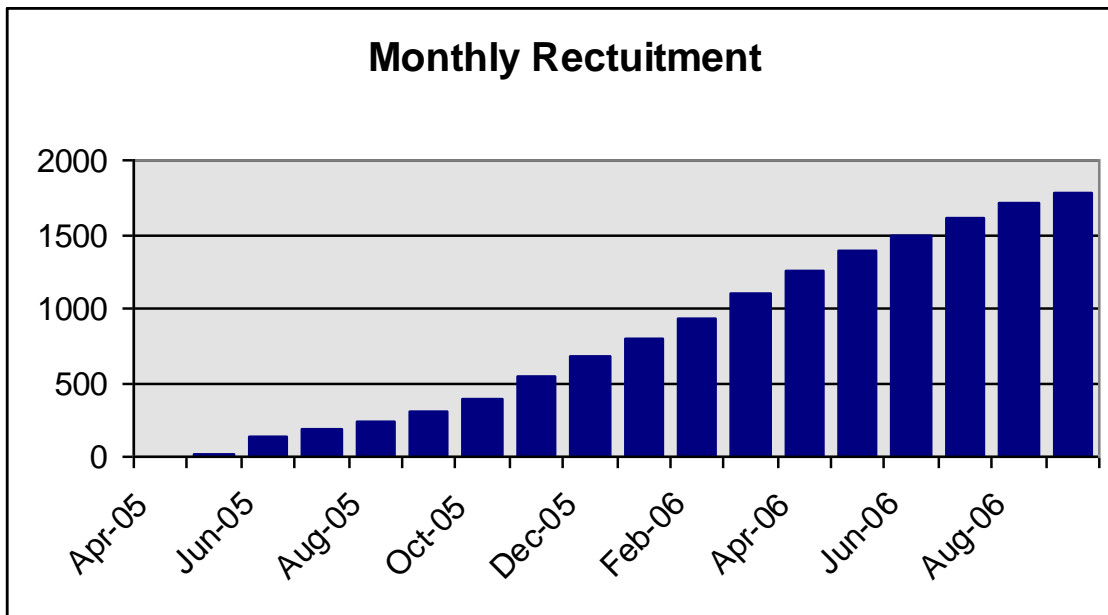

We are still looking for additional sites and would ask all investigators that if they are aware of interested or suitable sites within their country to contact us. We would be especially interested in centres able to enrol ovarian, prostate and pancreatic cancer types.

We are also pleased that we will shortly be upgrading the data entry system. The new version essentially looks and behaves in the same way as current system but has allowed for some "glitches" to be resolved. In addition there are new features that should enable users to track subject with more ease.

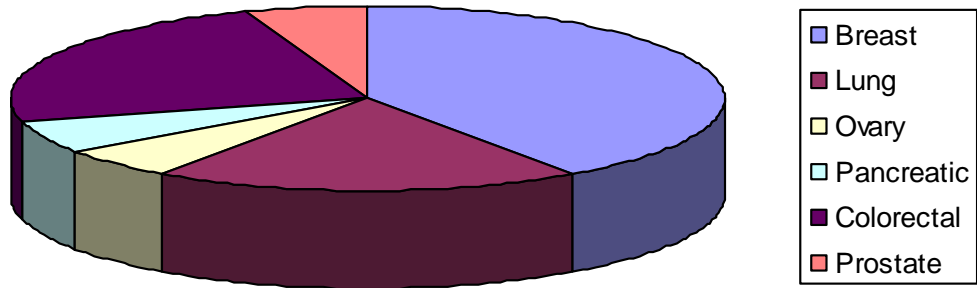

When we have a set date for the upgrade I will inform you all individually and contact each user to demonstrate the new system and upgrade your training.

Our thanks to you all for the achieved recruitment rates, which we are hoping will improve further once the new centres are fully up and running.

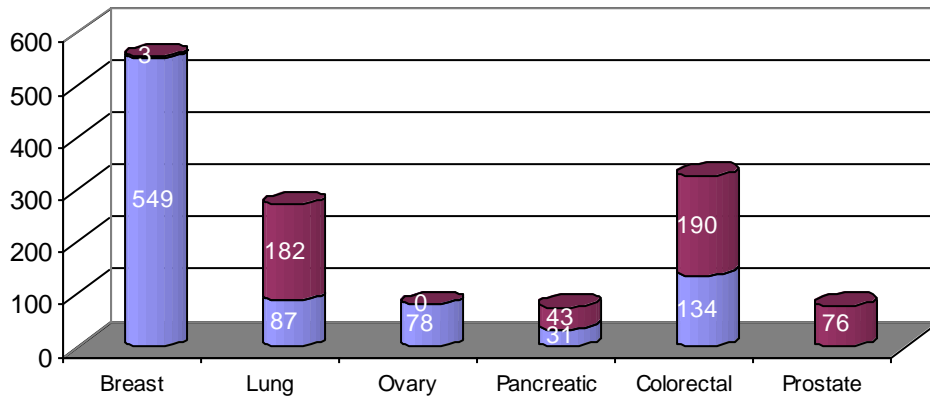

FIGURES AT THE 27TH SEPTEMBER 2006

Cancer Type Distribution

Sex Distribution

Age Distribution (Years)
